Your-Site has developed a Control Panel that allows you to create, modify and delete POP3 accounts, setup mail forwarding and setup auto responders. All of these functions are available to you 24/7.

To enter your control panel, please visit the following URL:

<http://cpanel.DOMAIN.com>

Use your master username login for the control panel. Please note that this will not work until your web site is completely accessible by its domain name.

In the example above, replace DOMAIN.com with your actual domain name.
