---

You can change the password by logging into your control panel at <http://cpanel.DOMAIN.COM> (replace DOMAIN.COM with your domain name) and using your master email address and password. Once logged in, you can change the password on any of the email accounts, as well as resetting the password on mySQL databases. Changing the password on the master account will also change it for FTP, webstats, cpanel and email access.

The new password has to meet some requirements:

- 1) At least 6 characters
- 2) Cannot contain the name of the user account
- 3) Has to contain at least 1 digit or special character
- 4) Has to contain at least 1 upper case letter
