---

We do have a website builder available for free to anyone with a "Personal" or "Professional" hosting plan. This tool is aimed at the new user that wants a simple way to create and maintain a website with little to no HTML knowledge and no requirement to install any software. More details as well as a demo are available at <http://www.your-site.com/sitebuilder.html>

If you wish to get started with the Sitebuilder, simply login to your cpanel (<http://cpanel.DOMAIN.COM> and replace DOMAIN.COM with your website address) with your master email address and password. Go to the bottom "MySQL" section and look for the yellow highlighted "Install Sitebuilder" and click it.
