

How can I manage my mySQL database?

The most common way is by using PHPMyAdmin webinterface. This can be accessed by going to <http://io.your-site.com>.

By default, we do not allow outside connections to the mySQL servers, so you will only be able to update or change your database from either this interface or by using the command line mySQL client available when you SSH into your account on the web servers. If you require access to the database from outside, we can enable this; simply email support@your-site.com
