We currently offer ZenCart (http://www.zencart.com) as a user installable package. If you want to install this, login to your cpanel and create a mySQL database. Once the database is created, the option to 'Install ZenCart' will appear. Just follow the instructions to install it and go to the URL provided after to complete the installation. Once installed, you will need to login to the server via FTP and delete the directory /www/zc_install and chmod the file /www/includes/configure.php to 444.
