We currently offer Drupal (http://drupal.org/) as well as "CMS Made Simple" (http://www.cmsmadesimple.org/) as user installable packages. Drupal is aimed at intermediate to advanced users, while CMSMS is aimed at newer users. We recommend visiting each site to see which one is right for you. A demo for Drupal is available at http://opensourcecms.com/index.php?option=content&task=view&id=132 and a demo of CMSMS at http://opensourcecms.com/index.php?option=content&task=view&id=452

If you want to install either of these, login to your cpanel (http://cpanel.DOMAIN.COM entering your website name in place of DOMAIN.COM) with your master email address and create a mySQL database. Once the database is created, the option to 'Install Drupal' or 'Install CMS' will appear. Just follow the instructions to install it then go to the URL provided to complete the installation.
