---

These settings are for Mac OS X 10.6 and higher. In each example below, we recommend using the exact server names that are listed:

- \* Full Name: Enter your full name as you would like it to appear on the messages that you send.
- \* Email address: Your email address
- \* Password: Your email address password
- \* Deselect "Automatically set up account" if it is enabled. Click Continue to proceed

- \* Incoming server type: IMAP
- \* Description: Give your account a useful description, such as "Anne's account". It can be called whatever you want.
- \* Incoming server name: imap.your-site.com
- \* Username: Your email address
- \* Password: Your Password
- \* Use Secure Sockets Layer (SSL): Yes
- \* Authentication: Password

### Outgoing Mail Server (SMTP)

- \* Outgoing server: smtp.your-site.com
- \* Use Authentication: Checked
- \* Username: Your email address
- \* Password: Your Password
- \* Use Secure Sockets Layer (SSL): Yes
- \* Authentication: Password

Verify your settings in the Account Summary. Check "Take account online". Click "Create" to complete the process.
