When adding an email account, choose "Other Account".

Enter your email address and password. It will attempt to guess your email settings, which will not be correct. Look for "Advanced" and manually enter the settings:

Account name: Whatever you want to call it

Your name: Name

Incoming email server: imap.DOMAIN.COM

Account type: IMAP4

User name: Your full email address

Password: Your email acct password

Outgoing (SMTP) email server: smtp.DOMAIN.COM

Outgoing server requires authentication: yes/checked

Use the same user name and password for sending email: yes/checked

In the examples above, replace DOMAIN.COM with your website name.
